

PHENOLIC RESIN - CK 1636

CK 1636 is a thermoset alkyl phenol formaldehyde resin which when used in chloroprene rubber solution adhesives gives the following properties:

- Good heat resistance and excellent adhesives strength properties
- Compatible with most types of chloroprene rubber
- Excellent flocculation resistance for most formulation
- Long tack time characteristics

CK 1636 is an ideal resin for general purpose contact adhesives.

SPECIFICATIONS*

Appearance :	Coarse-crushed amber solid
Softening point :	102-105oC
Methanol Tolerance Value :	5 to 30 ml
Gardner Colour Scale :	-1 to 3

The material complies as per above specification
